

## Netgear Switch Set Up Guide

### Netgear M4xxx AV-Line

The Netgear M4250, M4300, M4350 and M4500 switches present common AV controls with user-selectable profiles for different AV platforms making configuration simple for integrators.

Simple select the 'Video over IP' profile on the home page of the switch GUI.

If you are using a switch that has already been configured for other purposes, please factory reset the switch using the instructions contained within the Netgear User Guide. For new switches, the Multicast equipment can be connected directly and configured straight away.
